

Spearheading the Africa Healthcare Federation

Dear Reader,

We are proud to announce the launch of the inaugural Africa Health Business Symposium, set to take place on 6th-7th October 2016 at the Safari Park Hotel in Nairobi, Kenya. The event is themed **“Growing the Business of Health in Africa”** and aims at influencing policies towards increasing the accessibility and affordability of healthcare across Africa.

There has been a paradigm shift in the relationship between public and private sector over the past years in Africa. This enhanced dialogue progress has created a positive trend in enhancing Public Private Partnerships in Health on the continent. The countries in the regions that share culture, traditions and challenges have federated to jointly combat the high burden of disease within its own boundaries by sharing knowledge and resources to improve overall health for its citizens. We have noticed that the East African, West African, South African, Central African and North African private sectors will all soon harmonise its regional federations towards a positive output to health to ensure that the momentum is maintained.

The event is the one and only exclusive Pan-African platform that will provide space for open dialogue to discuss and encourage African governments to carry out reform programs that will foster public-private partnerships in healthcare and to create systems that will encourage investments, growth and improvement in the private healthcare sector.

Participate with over 350+ high level delegates from Ministries, policy makers and captains of the industry in one gathering to further propel effective and true partnerships for better health in Africa. **JOIN US** and **REGISTER NOW** for the limited slots available.
