

HIV and TB: Using the best science to save lives

Applying science to save lives worldwide

Since 2009, Jhpiego has targeted evidence-based approaches, such as index testing and HIV self-testing, to support **22,256,387** people to know their HIV status, including **622,552** people who were living with HIV. We've linked clients to the prevention and treatment services they need by providing:

- Antiretroviral therapy services for **229,613** people living with HIV, with **95%** viral load suppression among those with access to testing.
- TB preventive treatment for **69,856** people living with HIV (FY22 to date).

Scaling new interventions with fidelity

- Since 2003, Jhpiego has provided **5,476,433** men with access to safe voluntary medical male circumcision. We've served more clients than any other implementer.
- Since 2016, we've trailblazed implementation of pre-exposure prophylaxis for HIV prevention (PrEP) at scale, supporting **120,752** people to initiate PrEP. Now, we're piloting online and physical pharmacy models.
- Today, we're leading **implementation science** on the introduction of injectable PrEP and a PrEP vaginal ring.
- We are working on enhanced TB case finding, treatment, and prevention.

Serving people in ways that matter to them

- As early adopters of **design and demand** approaches, we elevate clients as co-designers and decision-makers to offer **equitable, respectful, empathetic** services for all.
- Immersed in communities, our demand creation programs and services reach an intersection of underserved men, women, adolescents, children, and key and vulnerable populations in conflict settings and across sectors.

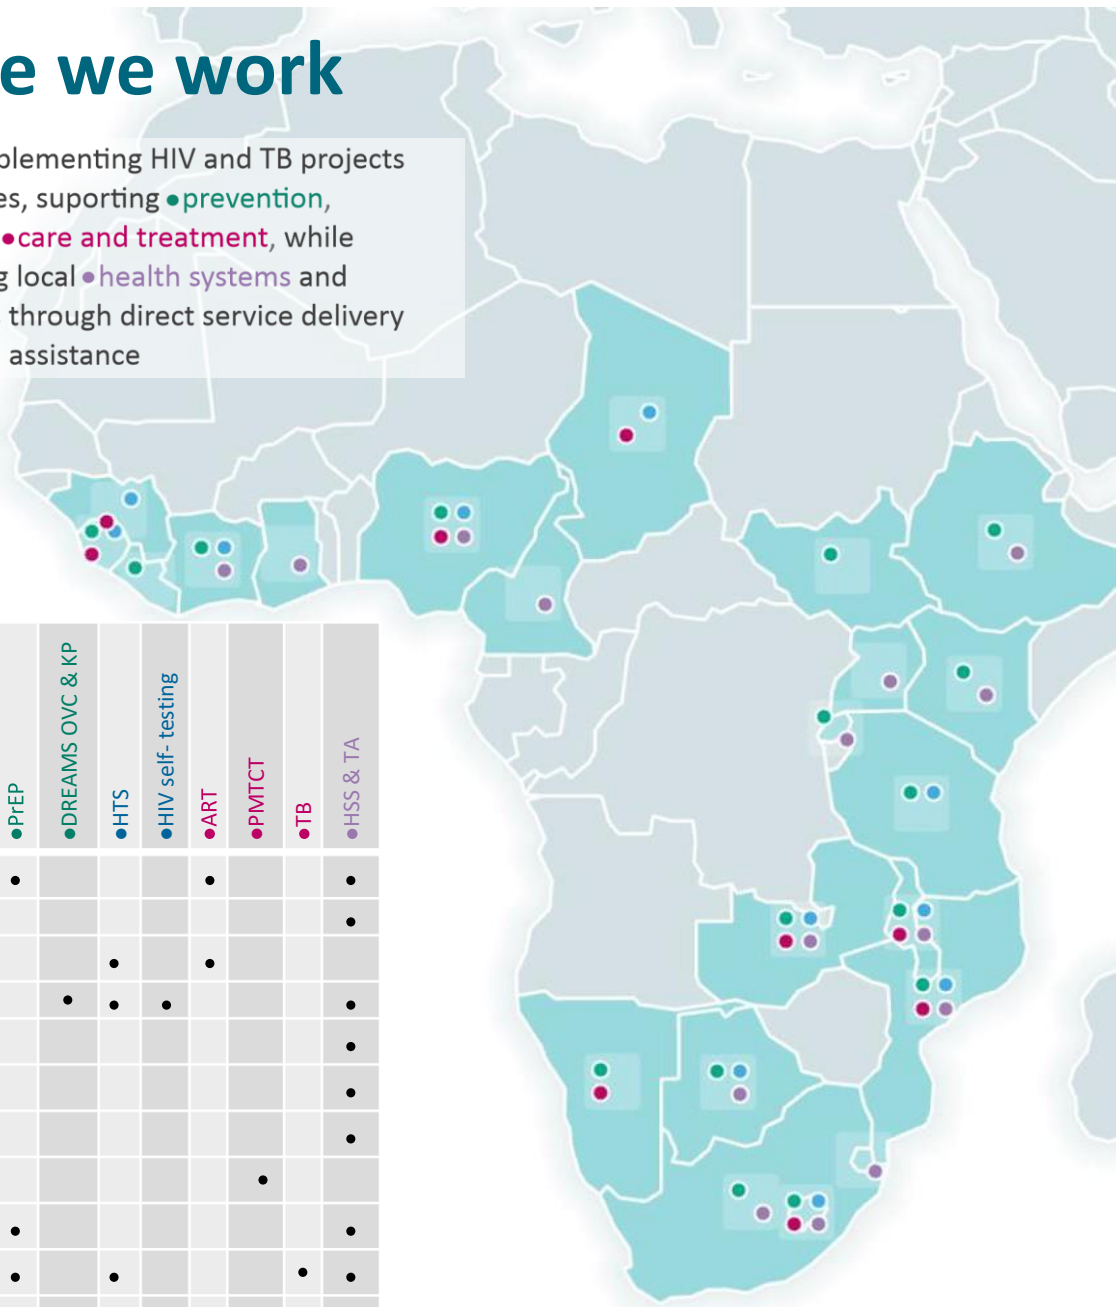

Frontier technology that promotes quality

- We use **machine learning** to predict which clients are likely to need enhanced support to stay on treatment.
- We analyze **social media content** to understand how the people we reach talk about health and health-seeking behaviors with peers.
- We use software to search for in our data to ensure confidence in our **data quality**.

Where we work

Jhpiego is implementing HIV and TB projects in 22 countries, supporting ●prevention, ●testing, and ●care and treatment, while strengthening local ●health systems and organizations through direct service delivery and technical assistance
